REVADER®

Setting up your product
with iVMS4200 (desktop/laptop)

You will need:

- If you are accessing the unit via Wi-Fi:
    - o Computer with Wi-Fi access
    - o Wi-Fi password
    - o Username and password of the unit (supplied by provider)
    - o Internal IP address of the unit (supplied by provider)

- If you are accessing the unit via SIM card:
    - o Computer with internet access
    - o IP address of SIM card (supplied by provider)
    - o Username and password of the unit (supplied by provider)

Important:

If you are setting up the unit via Wi-Fi, you will need internet access to download the iVMS4200 software. We suggest downloading the program on your computer before installation of the units.
We suggest Changing the username and passwords of your product for security reasons.

REVADER®

v) Tick **'Enable'** This allows the software to let you know when a newer version is available.

Upgrade Detection ✕

❓ After enabling the upgrade detection function, when there is a new version of the client available, you will receive notification and you can experience the new features or improvements. Enable now?
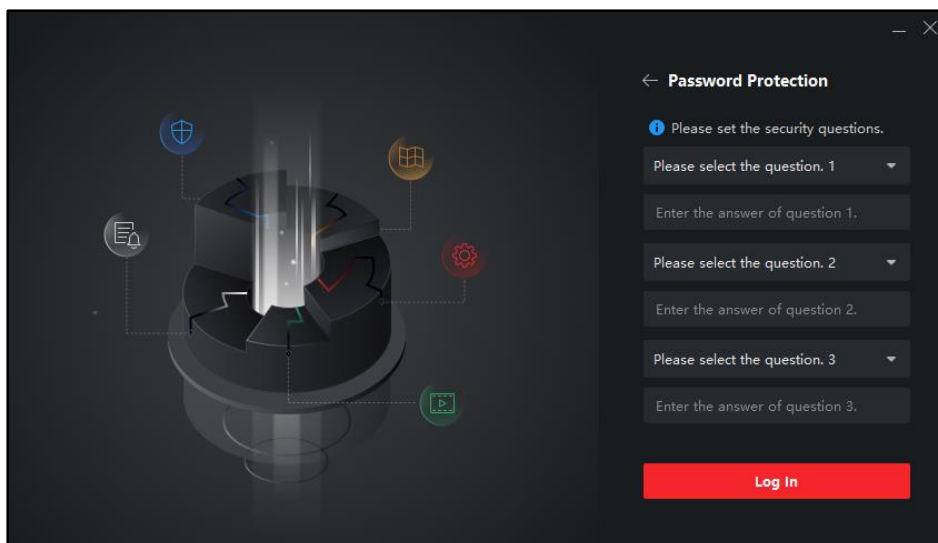

[**Enable**] [**Disable**]

vi) Create a username and password for accessing the software (keep a note of your chosen credentials).
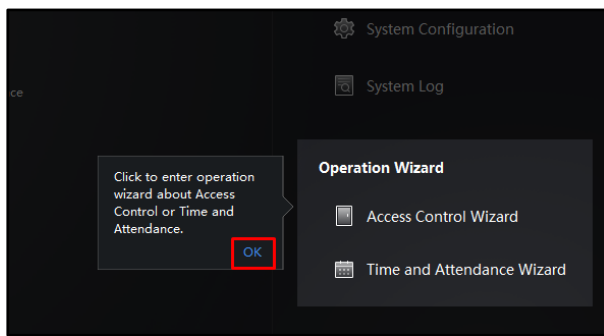

If '**Auto-Login'** is selected the user will not have to input a username and password, therefore we advise **'Auto Login'** should be disabled for customers with multiple users.
